Claim

1   1.   A system for automatically deploying data in a computer network comprising:

2   a retrieval mechanism configured to automatically retrieve and deploy data to a

3   destination upon occurrences of certain events from different sources associated with a

4   website development and maintenance application during its use and operation; and

5   a storage mechanism configured to store data in a manner that is transparent to a user

6   upon the occurrence of an event.
